RX Platform Family Overview

RX-78 Baseline

- [] General-purpose prototype frame with high adaptability, unusual survivability, and a long support tail that Finance still discusses quietly.
- [] Learning computer behavior may appear confident before it is correct. This is considered normal enterprise software behavior.
- [] Field repairs should preserve original sensor alignment. Hammer-based calibration is not approved despite historical precedent.

RX-93 Advisory

- [] Psycho-frame integration increases responsiveness and the number of meetings required before deployment.
- [] Fin funnel behavior depends on pilot certification, operating conditions, and narrative pressure.
- [] Do not install aftermarket mental interface accessories. Anaheim Support will notice and ask why.

Service and Liability Notes

Maintenance Escalation

- [] Open a LunaNet ticket for unexplained thrust drift, cockpit warnings, or any diagnostic that uses the word resonance.
- [] Attach sortie logs, maintenance photos, and a statement confirming the pilot did not override the obvious warning.
- [] RX-Series support response times vary by plan tier, colony location, and whether your account manager is currently denying involvement.

Corporate Reminder

Anaheim Electronics provides advanced mobile suit technology to qualified organizations across the Universal Century. Neutrality is a brand position, a contract posture, and occasionally an invoice line item.
